Education

University of Warwick *Coventry, UK*

BSc Computer Science (First Year Grade: 2:1) Sep 2025 – Jun 2028

- **Relevant Modules:** Design of Information Structures, Programming, Algorithms, Discrete Mathematics, Probability and Statistics, Computer Architecture

Personal Projects

Overclock (Productivity App) | *Python, Flask, SQLite, PyInstaller* 2026

- Developed a cross-platform Python CLI app that edits system hosts files via UAC/sudo permissions, **successfully blocking distracting sites** during focus sessions.
- Implemented Python threading to run a background Flask server, enabling users to view a **live web dashboard** without interrupting the main CLI app.
- Engineered a local SQLite database to log focus sessions, **visualising tracked productivity data** through interactive Chart.js graphs and Jinja2 templates.
- Packaged the full application and HTML templates into a single desktop executable using PyInstaller, **simplifying distribution** for end users.

Lambda-GPT | *Haskell, Open Meteo API* 2026

- Built a modular Haskell chatbot capable of **natural language parsing**, optimising feature additions by combining parsing logic with IO actions.
- Delivered **real-time weather reporting** for 10 UK cities by integrating the Open Meteo API using http-conduit for HTTP requests and **aeson** for JSON deserialisation.
- Optimised API coordinate data retrieval to achieve **fast** $O(\log n)$ **lookup times** by structuring location data within Data.Map dictionaries instead of linear lists.

Personal Portfolio Website | *React, Tailwind CSS, Vite* | *Link* 2026

- Developed a **responsive two-page portfolio** using React and Tailwind CSS.
- Programmed a **custom light and dark mode engine** using React hooks for state management.

Experience

Palantir Technologies *London, UK*

Digital Skills Day Participant 2024

- Utilised Palantir software and LLMs in a team to build a **social media bot detection tool**, presenting our final solution to the group.
- Applied **decomposition problem-solving** during a technical workshop, breaking down complex tasks into manageable group solutions.

Imperial College London *London, UK*

Maker Challenge Participant Jan – Mar 2024

- Worked in a team to design and build a functional prototype for a real-world problem using **CAD software** and **3D printing**, managing the complete project lifecycle.
- Presented the technical build process and final product to a panel, demonstrating strong problem-solving skills and the ability to **meet strict deadlines**.

Technical & Professional Skills

Languages: Python, Java, C, Haskell, JavaScript, SQL, HTML/CSS
Frameworks & Libraries: React, Flask, Tailwind CSS, Chart.js, Jinja2, jQuery
Tools & Software: Git, Linux (CLI), SQLite, PostgreSQL, Vite, PyInstaller, VS Code, Replit
Spoken languages: English (Fluent), Ukrainian (Native), Russian (Fluent), Portuguese (Pre-intermediate)
